-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Agrusa et al (US 2004/0024891).

3. With respect to substantially similar **claims 1, 8, 9, and 10**, Agrusa teaches a computer-implemented method of reassigning jobs in a manufacturing system, comprising: receiving status data relating to a first manufacturing machine scheduled to perform a job; determining whether the status data indicates the first manufacturing machine is unavailable to perform the job; and if the status data indicates the first manufacturing machine is unavailable, identifying a second manufacturing machine operable to perform the job, and reassigning the job from the first manufacturing machine to the second manufacturing machine (paragraphs 0047, 0050, 0069).

4. As to substantially similar **claims 2, 3, 6, 7, 11 and 12**, Agrusa teaches the method of claim 1, wherein receiving status data relating to a first manufacturing machine comprises receiving data indicating the first manufacturing machine is malfunctioning, transmitting instructions to schedule the job for performance at the second manufacturing machine and update a schedule to indicate the job has been reassigned from the first manufacturing machine to the second manufacturing machine. (paragraph 0049).
5. Regarding **claim 4**, Agrusa teaches the method of claim 1, wherein determining whether the status data indicates the first manufacturing machine is unavailable comprises querying a database to determine a meaning for the status data (paragraph 0053).
6. With respect to **claim 5**, Agrusa teaches the method of claim 1, wherein identifying a second manufacturing machine operable to perform the job comprises querying a database for a machine operable to perform the job (paragraph 0051).
7. **Claims 13 and 15-20** contain similar limitations as the claims provided above and therefore are rejected under the same rationale.
8. As to **claim 14**, Agrusa teaches the method of claim 13, wherein maintaining a database identifying characteristics of a plurality of manufacturing machines comprises maintaining a database comprising data specifying the functional capabilities of a plurality of manufacturing machines (paragraphs 0059 "...type given as a redundant server...", 0069, 0070 and 0073, figure 14).
